

NX3 dual-cure cement exhibits unparalleled color stability with its patented *amine-free* initiator system.

INLAY/ONLAY

1. Apply try-in gel to restoration and seat. Check color and fit. Remove restoration.

2. Thoroughly wash out try-in gel. Air dry. Shield silane primer from ambient light and apply.

BONDING

3. Select bonding system and apply to prep.

4. Dispense NX3 cement (light-cure or dual-cure) directly into veneer.

5. Seat veneer. Spot cure for several seconds. Remove mylar strip. Clean excess cement from margins.

6. Light cure all surfaces for 20 seconds each.**

7. Finish and polish.

NX3's optimal
handling allows
easy cleanup
in gel state.

CERAMIC CROWNS

1. Apply try-in gel to
restoration and seat.
Check color and fit.
Remove restoration.

2. Thoroughly wash out
try-in gel. Air dry.
Shield silane primer
from ambient light
and apply.

BONDING

3. Select bonding system and apply to prep.

4. Dispense NX3 cement (light-cure or dual-cure) onto restoration or prep.

5. Seat restoration onto prep, allowing cement to flow from all sides. Tack cure (1-2 seconds) to facilitate cleanup. Remove excess cement.

6. Light cure all surfaces for 20 seconds each.**

7. Finish and polish.

Due to its proprietary *amine-free* initiator system, NX3 dual-cure cement exhibits superior compatibility with both total-etch and self-etch adhesives in dark-cure situations where there is limited light accessibility.

NX3 simplifies your procedure – it is not necessary to use a primer/adhesive on the metal surface.

METAL-BASED CROWNS

BONDING

3. Select bonding system and apply to prep.

4. Dispense NX3 dual-cure cement onto restoration or prep.

5. Seat restoration onto prep, allowing cement to flow from all sides. Tack cure (1-2 seconds) to facilitate cleanup. Remove excess cement.

6. Light cure all surfaces for 20 seconds each.**

7. Finish and polish.

NX3 can be used as a core build-up material. Its excellent dark-cure compatibility with acidic adhesives enables bulk filling ability.

POSTS & CORE

1. Prepare post space.
Size and fit post.

BONDING

1. Select bonding system and apply to prep.

2. Sandblast & clean inside surface of restoration.
Dispense NX3 dual-cure cement onto restoration or prep.

3. Seat restoration onto prep, allowing cement to flow from all sides.
Tack cure (1-2 seconds) to facilitate cleanup.

Remove excess cement.
4. Light cure all surfaces for 20 seconds each.**

5. Finish and polish.
